NOT ALL FOAMS ARE BORN EQUAL!

It's pure science.

Did you know that the pH level of a milk, beer or aquafaba can vary depending on the brand, storage and even the geographical location?

The pH level of the foam you print on has a direct impact on the hue of the print when printing with the Chameleon Pod.

This is why you should expect the same design to look different when printed with the Chameleon Pod and Chameleon based blends on a variety of drinks.

printed with Ocean Blend on Dark Beer, Coffee and Cocktail
